Hi Christine,

Thank you for this nomination, we have just begun officially contacting nominees and other experts ERG has identified independently. We will add Dr. Berenbaum to our list and contact her shortly.

FYI- a few of your other nominees have responded. Note that Dr. James Karr has indicated he has been retired for the past 8 years and no longer conducting such work.

Regards,

Laurie

I know yesterday was the final day for nominations. This is one name that I'd like to add in addition to the list sent to you earlier. If you are looking for some out of the box thinkers who have no ties whatsoever to this work, I feel very strongly that you should consider the following individual for the peer review process. Dr. Berenbaum's background is in entomology and chemical ecology, however, her "reach" is beyond measure.

May Berenbaum maybe@uiuc.edu

Professor and Head of Entomology
Plant Biology Affiliate
320 Morrill Hall MC-116
217-333-7784

She is a scientist of the absolute highest quality and could certainly be able to grasp the extent of this multi-dimensional study and ferret out what does not belong. If there are gaps, she will identify them. Her CV is attached.

Most sincerely,

Christine Wagener

I have been following the Minnesota Pollution Control Agency research on wild rice and sulfate, and serve as an “ad hoc” member of the Wild Rice Advisory Committee. I am forwarding some recommendations for eligible scientists/engineers that you may wish to consider for the MPCA Wild Rice-Sulfate research review. A number of those listed are members of the EPA Scientific Advisory Board. I’ve attempted to give you a link that may reveal some background information on the individual mentioned.

I am not personally familiar with any of these individuals, although I studied under Dr. Karr many years ago.

The list is intended to assist in your search process. Thank you for your consideration.

Christine M. Wagener, PhD
